- For analytical and preparative separations of basic and acidic compounds

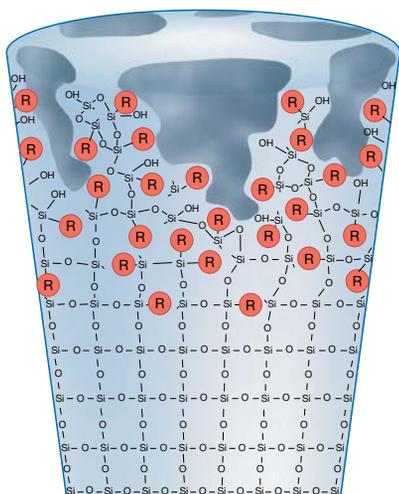

If Gemini analytical columns do not provide at least an equivalent separation as compared to a competing column of similar particle size, similar phase and dimensions, send in your comparative data within 45 days and keep the Gemini column for FREE.

| Phase | Description | USP Classification |
|-----------|---|--------------------|
| NX-C18 | The most rugged Gemini column, offering 5 times the durability of previous generation hybrid columns | L1 |
| C6-Phenyl | A low bleed phenyl phase. For UV and MS detection, which offers an aromatic selectivity complementary to C18 phases | L11 |
| C18 | Selectivity, high structural integrity and increased loadability for preparative and purification applications in pre-packed columns and bulk media | L1 |

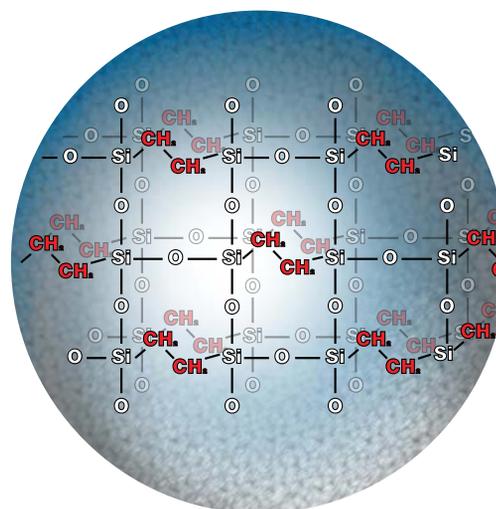

TWIN™ (Two-In-One) Technology™

During the final stage of silica manufacturing a unique silica-organic layer is grafted to create a completely new composite particle. Since the internal base silica is unaltered by this manufacturing process, the particle retains its mechanical strength and rigidity along with excellent efficiency, while the silica-organic shell protects the particle from chemical attack.

Second-Generation TWIN-NX™ Technology

TWIN-NX technology uses an improved patented organo-silica grafting process which incorporates highly stabilizing ethane cross-linking. These organic groups are evenly incorporated into the grafted layers on the silica surface while maintaining a pure silica core. This not only provides resistance to high pH attack, but also maintains the high efficiency and mechanical strength of a silica particle.

Virtually No LC/MS Bleed

The increased stability of Gemini columns provide the ultra-low bleed profile required for high sensitivity LC/MS applications. The advanced TWIN™ Technology used for Gemini columns limit phase cleavage and stabilizes the silica surface. When compared against a background MS profile, Gemini columns demonstrate virtually no column bleed across a wide mass range.

Low Bleed Phenyl Phase

One of the weaknesses of traditional phenyl phases has been excessive bleed in UV and MS. Gemini C6-Phenyl columns demonstrate far lower bleed than many other phenyl columns. Indeed, in this example the Gemini C6-Phenyl column shows lower bleed than a popular C18 column.

Conditions for all columns:
